

# Secure Element for EUDI Training

An essential two-day training program for organizations and government entities involved in the design and deployment of eID wallet schemes

8-9 October  
Brussels, Belgium

The standard for  
secure digital services  
and devices

# Join Us for GlobalPlatform's Inaugural Secure Element for EUDI Training

Are you a wallet issuer, wallet developer or otherwise involved in the design, development or deployment of one or multiple eID wallet schemes?

**Join us in Brussels this October to learn how GlobalPlatform technologies seamlessly support the roll out of European Digital Identity (EUDI) initiatives.**

## GlobalPlatform's brand new two-day training program will provide:

- ✓ A comprehensive understanding of mobile wallet and eID systems and their significance in today's digital landscape.
- ✓ Improved theoretical and design knowledge in eID systems and an enhanced ability to develop secure digital services.
- ✓ A broad understanding of how to design and deploy eID wallet schemes in line with the requirements of regulation bodies. Specifically:
  - How GlobalPlatform enables compliance with the EU's mandate for secure elements (SEs) in devices;
  - Considerations relevant to the upcoming ENISA certification scheme.
- ✓ A deep dive into the GlobalPlatform technologies supporting EUDI wallets and digital identity: Secure Elements (SEs); Secured Applications for Mobile (SAM); and Cryptographic Service Providers (CSP).
- ✓ Complimentary access for some training participants (government representatives and GlobalPlatform members) to GlobalPlatform's eID Wallet Seminar, taking place on 10 October in Brussels.

## Course Description

The two-day program offers an overview of SE technology, before sharing an in-depth overview of mobile wallets.

### Day 1

Participants will explore GlobalPlatform's role in digital security and understand SE technology in detail.

### Day 2

Participants will go deeper into deployments on embedded SEs and eSIMs, two SE form factors available on most smartphones. The course will also explore other GlobalPlatform technologies that can support the EUDI initiative, such as Cryptographic Service Providers (CSP) and Protection Profiles for CSP. The session will cover Secured Applications for Mobile (SAM), including the SAM configuration, eSIM and SAM Public Key Infrastructure (PKI), and its deployment in an eID wallet use case. The one-to-many deployments model (involving SE Management Service & Decentralized SE Management) will be examined in detail. The day concludes with an interactive EUDI wallet workshop, offering practical deployment scenarios.

## Program / Registration Details

 **Date**  
8-9 October, 2024

 **Time**  
09.00-17.00

 **Venue**  
Comet Meetings  
– Louise Pl. Stéphanie 20,  
1050 Bruxelles, Belgium

**Delivered in English by**  
**Gil Bernabeu**, GlobalPlatform's  
Chief Technology Officer

 **Discounts available** for  
GlobalPlatform members  
and government entities

**Co-located with the  
GlobalPlatform EUDI Wallet  
Seminar (Brussels, 10 October):**
